About the security partial trust allow list

An intermediate certificate was incorrectly issued by the certificate authority CNNIC. This issue was addressed through the addition of a mechanism to partially trust a CA by trusting only a set of certificates.

On OS X, trust can be revoked from either of the CNNIC root certificates or from any certificate in the Allow List using the following steps:

- Find the certificate you wish to never trust. For example, click on the lock icon in Safari and then drag the icon of the certificate to a location on your desktop.
- Double-click on the certificate to open it in Keychain Access. For leaf certificates, you will need to double-click the certificate to open it. In the case of root certificates, you will be prompted upon import into Keychain Access.
- Change the trust setting to Never Trust.

You can find the version of the Trust Store installed on your iOS device by tapping Settings > General > About. Scroll down to the bottom of the list to see the Trust Store version.

For a complete list of trusted certificates, see the OS X Trust Store and iOS Trust Store.

Contents of the CNNIC certificates trusted by OS X and iOS

Certificates issued by "China Internet Network Information Center EV Certificates Root" in the trusted set
